CLIMATE  
CEILINGS

# What are Dimkisol Climate Ceilings?

The climate ceiling is available as a system ceiling in **two variants, the lay-in and clip-in systems**. **With the lay-in system**, the supporting structure remains visible. With the clip-in system, the support structure is hidden and the tiles are clicked into the clip profiles. Removing the tiles is very simple with either system. The choice of type is primarily for the visual aspect. **A system wall is also available**, which uses only the clip-in method.

**The climate ceiling heats and cools using air only!**

## COLOURS

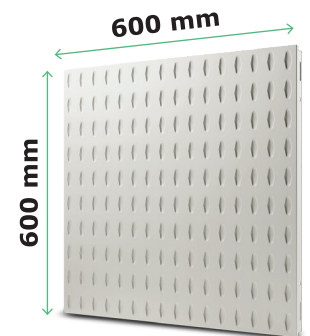

**BLACK**

**WHITE**

*\*RAL colour of your choice available at extra cost.*

## SIZE

**Heating, cooling, lighting and acoustics incorporated into a single product!**

## APPLICATIONS

The tile with perforations is a unique product and is suitable for **cooling and heating offices, meeting rooms, shops, etc.**

This tile has also been installed and used satisfactorily for years in **industrial applications such as supermarkets, flower auctions, laboratories, packaging centres for refrigerated products, data centres, and more.**
